

## Mahindra South Africa unveils the all new range of “Mahindra Powerol” Diesel Generators.

**Johannesburg, March 13 2018:**

**Mahindra Powerol Generator:** Mahindra South Africa, today announced its entry into the higher kVA diesel generators (DG) with the launch of its all new range of **250/320 kVA DGs** powered by Mahindra mPower series engines at BAUMA CONEXPO 2018, South Africa. Designed at its R&D hub at Mahindra Research Valley in Chennai, India and manufactured at its Chakan plant near Pune India, this new range of 9.3 Litre engine is the latest addition to Mahindra Powerol's mPOWER series and comes equipped with the technologically advanced CRD engine. The CRD engine are powered with superior & advanced **Common Rail Diesel Engine (CRDe)** technology. CRDe technology is future ready and best known for heavy duty performance and fuel efficiency, also has very low emission which is best in its class. The noise decibel of this generators is also one of the best in class with a dba of 75 at 1 meter distance. The Diesel Generator is also equipped with **DiGi-SENSE technology** which makes it a **Smart DG**. The high block loading capacity of the Mahindra Powerol DG Sets **enhances the DG performance against a high instantaneous load** which is useful for heavy duty applications. The performance of **Smart DG** sets can be monitored real-time remotely from anywhere, thereby improving the uptime of the DG Sets. Customer has the option to enable this feature subject to his agreement with the service provider's infrastructure and tariffs. The total cost of operation is lowest in its class. With the addition of this generator, Mahindra Powerol now offers a range from 10 kVA to 320 kVA. Mahindra Powerol DG sets are supported by Mahindra Powerol dealers across all the provinces.
